

**TEST REPORT****IEC 62471:2006****Photobiological safety of lamps and lamp systems**

Report reference No .....: RSZ150706551-03M1

Compiled by (+ signature) .....: Colin Zhang *Colin Zhang*Approved by (+ signature) .....: Alice Liu *Alice Liu*

Date of issue .....: 2015-07-09

Testing laboratory .....: Bay Area Compliance Laboratories Corp. (Dongguan)

Address .....: No.69 Pulong Village Puxinhu Industry Zone Tangxia,Dongguan,  
China.

Testing location .....: Same as above

Applicant .....: Guangzhou Hongli Opto-Electronic Co., Ltd.

Address .....: No.1, Xianke Yi Road, Huadong Town, Huadu District, Guangzhou,  
China

Standard .....: IEC 62471:2006

Test sample(s) received.....: 2015-07-07

Test in period.....: 2015-07-08

Procedure deviation .....: N.A.

Non-standard test method .....: N.A.

This test report is for the customer shown above and their specific product only. It may not be duplicated or used in part without prior written consent from Bay Area Compliance Laboratories Corp. (Dongguan). This report must not be used by the customer to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government. This report is valid only with a valid digital signature. The digital signature may be available only under the Adobe software above version 7.0.

Type of test object .....: LED Package

Trademark .....: None

Model/type reference .....: HL-A-2835D46W-S1-08-HR3

Manufacturer.....: Guangzhou Hongli Opto-Electronic Co., Ltd.

No.1, Xianke Yi Road, Huadong Town, Huadu District, Guangzhou,  
China

Rating .....: 180mA

**General product information:**

| Model                   | Input parameters | CCT   |
|-------------------------|------------------|-------|
| HL-A-2835D46W-S1-08-HR3 | 180mA            | 5700K |
|                         |                  | 5000K |
|                         |                  | 4000K |
|                         |                  | 3000K |

From above table, all models have same electrical parameters. They difference just in CCT.  
5700K is the worse case, which could cover other CCT. Unless otherwise specified, the 5700K was chosen as the representative models to perform the test.

**Remarks:**

The measured LED, part number HL-A-2835D46W-S1-08-HR3, with ANSI bin 5700K.

|       |  |   |   |
|-------|--|---|---|
|       | $L_B = \frac{\int_{300}^{700} L_\lambda \cdot B(\lambda) \cdot \Delta\lambda}{t} \leq 100 \quad W \cdot m^{-2} \cdot sr^{-1}$  | $L_B = 81 \quad W \cdot m^{-2} \cdot sr^{-1}$                 | P |
| 4.3.4 | Retinal blue light hazard exposure limit - small source  | = 0.0040 rad  | P |
|       | Thus the spectral irradiance at the eye $E_\lambda$ , weighted against the blue-light hazard function $B(\lambda)$ shall not exceed the levels defined by: see table 4.2   |   | P |
|       | $E_B \cdot t = \frac{\int_{300}^{700} E_\lambda(\lambda, t) \cdot B(\lambda) \cdot \Delta\lambda}{t} \leq 100 \quad J \cdot m^{-2}$  |   | N |
|       | $E_B = \frac{\int_{300}^{700} E_\lambda(\lambda) \cdot B(\lambda) \cdot \Delta\lambda}{t} \leq 1 \quad W \cdot m^{-2}$   | $E_B = 0.34 \quad W \cdot m^{-2}$                             | P |
| 4.3.5 | Retinal thermal hazard exposure limit  |   | P |
|       | To protect against retinal thermal injury, the integrated spectral radiance of the light source, $L_R$ , weighted by the burn hazard weighting function $R(\lambda)$ (from Figure 4.2 and Table 4.2), i.e., the burn hazard weighted radiance, shall not exceed the levels defined by: |   | P |
|       | $L_R = \sum_{\lambda=780}^{1400} L_\lambda \cdot R(\lambda) \cdot \Delta\lambda \leq \frac{50000}{380} \quad W \cdot m^{-2} \cdot sr^{-1}$   | $L_R = 6.8 \times 10^4 \quad W \cdot m^{-2} \cdot sr^{-1}$    | P |
| 4.3.6 | Retinal thermal hazard exposure limit – weak visual stimulus   |   | P |
|       | For an infrared heat lamp or any near-infrared source where a weak visual stimulus is inadequate to activate the aversion response, the near infrared (780 nm to 1400 nm) radiance, $L_{IR}$ , as viewed by the eye for exposure times greater than 10 s shall be limited to:          |   | P |
|       | $L_{IR} = \sum_{\lambda=780}^{1400} L_\lambda \cdot R(\lambda) \cdot \Delta\lambda \leq \frac{6000}{\alpha} \quad W \cdot m^{-2} \cdot sr^{-1}$  | $L_{IR} = 2.3 \times 10^2 \quad W \cdot m^{-2} \cdot sr^{-1}$ | P |
| 4.3.7 | Infrared radiation hazard exposure limits for the eye  |   | P |
|       | The avoid thermal injury of the cornea and possible delayed effects upon the lens of the eye (cataractogenesis), ocular exposure to infrared radiation, $E_{IR}$ , over the wavelength range 780 nm to 3000 nm, for times less than 1000 s, shall not exceed:                          |   | N |
|       | $E_{IR} = \sum_{\lambda=780}^{3000} E_\lambda \cdot \Delta\lambda \leq 18000 \cdot t^{-0.75} \quad W \cdot m^{-2}$   |   | N |
|       | For times greater than 1000 s the limit becomes:   |   | P |

|       |   |  |   |
|-------|---|--|---|
|       | $E_{IR} = \sum_{780}^{3000} E_\lambda \cdot \Delta\lambda \leq 100 \text{ W}\cdot\text{m}^{-2}$   | $E_{IR}=0 \text{ W}\cdot\text{m}^{-2}$ | P |
| 4.3.8 | Thermal hazard exposure limit for the skin  |  | P |
|       | Visible and infrared radiant exposure (380 nm to 3000 nm) of the skin shall be limited to:  |  | P |
|       | $E_H \cdot t = \sum_{380}^{3000} \sum_t E_\lambda(\lambda, t) \cdot \Delta t \cdot \Delta\lambda \leq 20000 \cdot t^{0.25} \text{ J}\cdot\text{m}^{-2}$ | $E_H= 0 \text{ J}\cdot\text{m}^{-2}$   | P |

|       |   |      |   |
|-------|---|------|---|
| 5     | MEASUREMENT OF LAMPS AND LAMP SYSTEMS   |      | P |
| 5.1   | Measurement conditions  |      | P |
|       | Measurement conditions shall be reported as part of the evaluation against the exposure limits and the assignment of risk classification.                                 |      | P |
| 5.1.1 | Lamp ageing (seasoning)   |      | N |
|       | Seasoning of lamps shall be done as stated in the Appropriate EN lamp standard.   |      | N |
| 5.1.2 | Test environment  | 25.3 | - |
|       | For specific test conditions, see the appropriate EN lamp standard or in absence of such standards, the appropriate national standards or manufacturer's recommendations. |      | - |
| 5.1.3 | Extraneous radiation  |      | P |
|       | Careful checks should be made to ensure that extraneous sources of radiation and reflections do not add significantly to the measurement results.                         |      | P |
| 5.1.4 | Lamp operation  |      | P |
|       | Operation of the test lamp shall be provided in accordance with:  |      | P |
|       | – the appropriate EN lamp standard, or  |      | N |
|       | – the manufacturer's recommendation   |      | P |
| 5.1.5 | Lamp system operation   |      | N |
|       | The power source for operation of the test lamp shall be provided in accordance with:   |      | N |
|       | – the appropriate EN standard, or   |      | N |
|       | – the manufacturer's recommendation   |      | N |
| 5.2   | Measurement procedure   |      | P |
| 5.2.1 | Irradiance measurements   |      | P |
|       | Minimum aperture diameter 7mm.  |      | P |
|       | Maximum aperture diameter 50 mm.  |      | P |
|       | The measurement shall be made in that position of the beam giving the maximum reading.  |      | P |

|         |  |                |   |
|---------|--|----------------|---|
|         | The measurement instrument is adequate calibrated.   | See appendix B | P |
| 5.2.2   | Radiance measurements  |                | P |
| 5.2.2.1 | Standard method  |                | P |
|         | The measurements made with an optical system.  |                | P |
|         | The instrument shall be calibrated to read in absolute radiant power per unit receiving area and per unit solid angle to acceptance averaged over the field of view of the instrument. |                | P |
| 5.2.2.2 | Alternative method   |                | N |
|         | Alternatively to an imaging radiance set-up, an irradiance measurement set-up with a circular field stop placed at the source can be used to perform radiance measurements.            |                | N |
| 5.2.3   | Measurement of source size   |                | P |
|         | The determination of $\theta$ , the angle subtended by a source, requires the determination of the 50% emission points of the source.  |                | P |
| 5.2.4   | Pulse width measurement for pulsed sources   |                | N |
|         | The determination of $\Delta t$ , the nominal pulse duration of a source, requires the determination of the time during which the emission is > 50% of its peak value.                 |                | N |
| 5.3     | Analysis methods   |                | P |
| 5.3.1   | Weighting curve interpolations   |                | N |
|         | To standardize interpolated values, use linear interpolation on the log of given values to obtain intermediate points at the wavelength intervals desired.                             |                | N |
| 5.3.2   | Calculations   |                | P |
|         | The calculation of source hazard values shall be performed by weighting the spectral scan by the appropriate function and calculating the total weighted energy.                       |                | P |
| 5.3.3   | Measurement uncertainty  |                | P |
|         | The quality of all measurement results must be quantified by an analysis of the uncertainty.   |                | P |

|       |   |   |   |
|-------|---|---|---|
| 6     | LAMP CLASSIFICATION   |   | P |
|       | For the purposes of this standard it was decided that the values shall be reported as follows:  |   | P |
|       | – for lamps intended for general lighting service, the hazard values shall be reported as either irradiance or radiance values at a distance which produces an illuminance of 500 lux, but not at a distance less than 200 mm | LED light for general lighting:<br>200 mm | P |
|       | – for all other light sources, including pulsed lamp sources, the hazard values shall be reported at a distance of 200 mm   |   | N |
| 6.1   | Continuous wave lamps   |   | P |
| 6.1.1 | Exempt Group  |   | P |

RSZ150706551-03M1

FINAL

|  |  |   |
|--|--|---|
|  | The risk group determination of the lamp being tested shall be made as follows:  | N |
|  | – a lamp that exceeds the exposure limit shall be classified as belonging to Risk Group 3 (High-Risk)  | N |
|  | – for single pulsed lamps, a lamp whose weighted radiant exposure or weighted radiance does is below the EL shall be classified as belonging to the Exempt Group   | N |
|  | – for repetitively pulsed lamps, a lamp whose weighted radiant exposure or weighted radiance dose is below the EL, shall be evaluated using the continuous wave risk criteria discussed in clause 6.1, using time averaged values of the pulsed emission | N |
